

TradingHub

SOFTWARE ENGINEER (QA)

Occupational Areas: Financial Analytics, Banking & Investment, Technology, Data, Computer Science

Salary Range: Competitive

Location: London EC2 (closest station: Liverpool Street)

About TradingHub:

TradingHub is a rapidly expanding Financial Services Technology (FinTech) company. Recently the firm was given an award in recognition for our contribution to trade and investment by the Department for International Trade and the UK Board of Trade.

We build cutting edge, AI-assisted, trade analysis software for our clients which consist of banks, hedge funds, asset managers, and other financial services institutions. Our products are used by these organisations to detect financial crime and enhance business performance based on the client's day to day trading data.

These products include:

- Best execution analysis
- Trader performance profiling and enhancement
- Insider trading and market abuse detection
- Rogue trader detection

Our products are market leading in each category:

- Advanced analytics and machine learning algorithms allow us to perform statistically rigorous analysis of all asset classes uniquely
- We use in-house programming languages, optimised for fast and complex analysis of large trade volumes
- All our tools have an intuitive user interface (built using in-house programming languages) that make it very easy for our clients to access our analysis

We view ourselves as a disruptive FinTech company that is nimble enough to move fast, innovate quickly and provide a premium level of client service and support.

Summary of role:

The QA team maintain oversight of all tools, standards and procedures for ensuring our created software provides an optimal client experience. Everything from reviewing 3rd party control systems to writing in house DevOps tooling. We are involved with every team and always look to create generic, reusable solutions with whichever tools are most appropriate. This work would appeal to candidates with a broad knowledge of computing who like to continually learn new things and do not mind dealing with rapidly changing priorities and projects.

Responsibilities will include:

- Analyse, in detail, all aspects of the financial market monitoring applications to determine how effective they are.
- Developing libraries and applications to verify the quality level of the products.
- Review new project proposals and determine potential issues.
- Liaising with other teams to ensure tooling remains product agnostic.

Requirements:

- General knowledge of computing software.
- Proficiency with C#, C++, Python or any OOP.
- Knowledge of SQL.
- Calm, detail-oriented, methodical approach.
